

horse, and human serum; granulocyte-macrophage colony-stimulating factor and erythropoietin preparations; human placental conditioned medium; lectin (phytohemagglutinin, concanavalin A, and pokeweed mitogen); and mixed leukocyte reaction-stimulated leukocyte-conditioned medium.

SCGF was detected only in human placental conditioned medium.

SCGF produced by the KPB-M15 cells was a protein with a molecular weight of 20,000. The molecule, highly purified by immunoadsorbent affinity chromatography, retained SCGF activity in vitro, e.g., erythroid burst-promoting activity and granulocyte-macrophage-colony potentiation. With the availability of purified SCGF, it is now possible to study in detail the mechanisms regulating hematopoietic stem cells.

CT *Antibodies, Monoclonal: IM, immunology

Cell Line

Chromatography, Affinity

*Colony-Stimulating Factors: AN, analysis

*Growth Substances: AN, analysis

Growth Substances: IP, isolation & purification

Growth Substances: PD, pharmacology

Hematopoietic Cell Growth Factors

*Hematopoietic Stem Cells: DE, drug effects

Humans

Immunoenzyme Techniques

Interleukin-3: AN, analysis

*Leukemia, Myeloid: ME, metabolism

Molecular Weight

*Placenta: AN, analysis

CN 0 (Antibodies, Monoclonal); 0 (Colony-Stimulating Factors); 0 (Growth Substances); 0 (Hematopoietic Cell Growth Factors); 0 (Interleukin-3)
